IBM Design Thinking Practitioner

David Dangerfield

Principal Software Engineer | Consumer Products, Health,
Payments, CleanTech, & Enterprise Software | 20+ years
Minneapolis, Minnesota, United States

Summary

I'm a Principal Software Engineer who genuinely loves the craft of coding, testing, shipping, and supporting software to delight clients, whether that's deep in an operating system module or polishing the last pixel of a UI component. I'm in the code every day, building new features, fixes, and upgrades across large, multi-repo systems. I combine an MS in Computer Science (Purdue), decades of deep-system engineering experience, and modern agentic AI tooling to deliver rapid solutions without sacrificing quality. I've worked across high-stakes environments, including payments, FDA-regulated healthcare platforms, applications serving millions of users, and commerce sites securing billions in revenue, always with the same goal: clean code, modern user experiences, and rigorous automated testing and deployment. Independent consultant since 2021, partnering with select clients on principal-level engineering, and open to the right full-time opportunity as well. Beyond the code, I love learning from teammates and sharing tips. I'm always up for a pair programming session.

Experience

Patterson Companies, Inc.

Principal Software Engineer

March 2025 - August 2026 (1 year 6 months)

- Led frontend architecture for a B2B client portal with associated admin experience, consolidating duplicated UI and Vue.js routing into a shared repository with Storybook and mock data
- Designed an app launch pattern enabling decoupled app initialization while preserving shared code
- Upgraded a multibillion-dollar revenue stream by rewriting legacy desktop-only Angular.js bill-pay frontend into a responsive, locale-aware Vue.js/TypeScript/TanStack architecture

- Transitioned into agentic AI development to improve my dev efficiency and software quality
 - Engineered a reusable UI component library from Figma designs, integrating Vue.js with a .NET/C# controller backend and mapping SAP responses to user feedback
 - Built a localized Customer Reports experience integrating embedded Power BI reports across e-commerce sites, including the supporting UI and integration architecture
 - Spearheaded multi-repo infrastructure modernizations, including a frontend linting upgrade and an org-wide JFrog Artifactory migration, each across 20+ repositories
- Tech: Copilot, Claude, Node.js, TypeScript, Vue.js, Microfrontends, Microservices, Azure DevOps, JFrog, i18n

Life Time Inc.

Lead Software Developer

July 2022 - March 2025 (2 years 9 months)

- Led frontend development for the Account team, digitizing the member guest pass experience to support hundreds of thousands of new accounts and app installs
- Spearheaded Vue 3 implementation for "Find A Location" featuring custom Google Maps integration
- Replaced legacy JavaScript libraries in core platform code to eliminate technical debt

Tech: GitHub Copilot, TypeScript, Vue.js, Bootstrap, Vite, Vitest, Playwright, Legacy Modernization, App Integration

Nurocor, Inc

Senior Software Engineer (concurrent part-time)

February 2018 - March 2024 (6 years 2 months)

- Architected compliant UI workflows for a structured authoring platform for FDA clinical trial documentation, supporting document templates, formal reviews, and complete audit trails
- Delivered award-winning frontend engineering for a protocol authoring platform recognized as "Best Integrated Protocol Authoring and Review Solution" by TransCelerate BioPharma

Tech: Vue.js, Nuxt.js, Storybook, GraphQL, Component Libraries, Kubernetes

NextEra Analytics

Principal Software Engineer Consultant

January 2021 - July 2022 (1 year 7 months)

- Developed "OMNI" project UIs featuring geospatial maps, diagrams, and dense financial data grids
- Introduced Apache ECharts to unlock a broad library of interactive, animated visualizations not previously practical to build in-house, enabling new product and data analytics charts
- Engineered an Angular-based iPad app via web views to streamline wind-site worker scheduling

Tech: TypeScript, Vue.js, GraphQL, ECharts, Angular, Storybook, Python, Terraform, AWS

Intricately (Acq. by HG Insights)

Senior Software Consultant (concurrent part-time)

September 2020 - February 2022 (1 year 6 months)

- Engaged directly by CTO as a frontend expert to provide technical oversight and establish best practices across a more junior international team
- Provided implementation guidance to ensure a smooth Vue 2 to Vue 3 migration path while reducing codebase complexity and avoiding over-engineering
- Mentored developers and built trust through code reviews and Vue 2 to Vue 3 migration plans

Tech: TypeScript, Vue.js, Node.js

SmugMug

Senior Software Engineer

September 2018 - January 2021 (2 years 5 months)

Mountain View, CA

- Migrated legacy payments code to Stripe, ensuring a locale-aware UI across 10 global currencies
- Engineered responsive trial-to-subscriber conversion flows supporting dynamic promotions
- Implemented data-driven conversion A/B testing via LaunchDarkly, integrating detailed tracking analytics and user feedback mechanisms, collaborating closely with product, UX, and design

Tech: AWS, Node.js, JavaScript, React, Tailwind, GraphQL, Continuous Deployment, Legacy Modernization, a11y, i18n

IBM

Advisory Software Engineer with Watson Health & IBM Services

November 2015 - August 2018 (2 years 10 months)

Rochester-Austin, Minnesota Area

- Led frontend engineering for Watson for Drug Discovery (Pfizer), iterating with UX on complex D3.js visualizations to translate 25M+ abstracts and 4M+ patent records into actionable insights
 - Built Vue.js application for "Project DOC," a \$3M funded clinical decision support application deployed at Su Clinica Familiar to optimize regional diabetes treatment models
 - Served as sole UI developer for a custom Vue.js app for call center staff at a major regional U.S. bank; delivered in under 2 months, with time onsite in Alabama, enabling NLP-ingested document search
 - Co-founded FED@IBM Rochester, an internal frontend developer community of 30+ engineers hosting twice-monthly sessions on JavaScript, accessibility, UI automation testing, and tooling
 - Transitioned to working remotely in May 2017
- Tech: IBM Bluemix (Cloud), Vue.js, Angular, React, JavaScript, i18n, D3.js, Mobile Web App, Legacy Modernization, a11y

Preventice Solutions

Senior Web Application Developer

August 2013 - October 2015 (2 years 3 months)

Rochester-Austin, Minnesota Area

- Built full-stack infrastructure for BodyGuardian, an FDA 510(k)-cleared ambulatory cardiac monitoring platform incorporating Mayo Clinic licensed remote monitoring technology
- Engineered an ActiveMQ message broker pipeline for the Notification Service to batch and deliver structured ambulatory telemetry reports to clinical review teams in a fault-tolerant manner
- Built Java web services for patient compliance app with integration test suite and code coverage
- Implemented claims-based (SAML) authentication flows for the multi-tenant Preventice Care Platform, including multi-role user sessions, ensuring appropriate HIPAA-compliant access controls
- Worked under formal FDA/HIPAA compliance protocols including SOPs, audit trails, required training, and documented sign-offs throughout the development lifecycle

Tech: Java, JavaScript, C#, REST APIs, ActiveMQ, SAML SSO, ASP.NET, SQL Server, Angular

IBM

Software Engineer → Team Lead → Test Architect

May 2002 - August 2013 (11 years 4 months)

Rochester-Austin, Minnesota Area

- Ported IBM Directory Server (LDAP) to IBM i (iSeries/AS400) in C++, contributing to a commercially shipped product on one of the most reliable enterprise platforms in the industry, used by major retailers and financial institutions worldwide
- Co-designed the test strategy and tool ecosystem for Blue Business Platform, a new product line, leading engineering teams in Beijing to run product validation across multiple simultaneous releases
- Automated software update packaging, eliminating 500+ person-hours annually and enabling self-service builds across teams
- Built test status dashboard, an early demonstration of frontend instincts within a systems engineering role
- Led product feature delivery team and managed transition of responsibilities to Beijing engineering teams

Tech: C++, LDAP, REST APIs, Java, JavaScript, Perl, IBM Db2, i18n

Purdue University

Research Assistant, Mobile Location-based Services

September 2001 - April 2002 (8 months)

West Lafayette, IN

Led undergraduate students developing a mobile location-based services research app on handheld devices.

Intel Corp.

Software Engineering Intern

May 2001 - August 2001 (4 months)

Hillsboro, OR

Researched and developed face-based search applications for the consumer photo market.

NI (National Instruments)

Software Engineering Intern

May 2000 - August 2000 (4 months)

Austin, TX

Implemented telnet APIs to enable LabVIEW end-users to automate tasks that involve remote systems.

Brigham Young University

Research Assistant, Neural Networks Lab

May 1999 - January 2000 (9 months)

Provo, UT

Research assistant to Dr. Tony Martinez developing neural network training model for handwritten character recognition engine in C

Education

Purdue University

Master of Science - MS, Computer Science · (2000 - 2002)

Brigham Young University

Bachelor of Science - BS, Computer Science

Westwood High School
